

FLEXTUBE is made of three layers of natural latex which lets the hose expand up to 3 times its original length.

Operating instructions:

1. Attach the expandable hose to the water source.
2. Attach the supplied shut off valve.
3. Attach the spray nozzle to the male end of the hose. The hose works best when used with the spray nozzle provided.
4. Turn the water on the source and gradually increase the pressure. The hose will start to expand up to 3 times its original length. It is recommended to never fully open the water tap, which also saves a lot of water.
5. When you're finished using the hose, make sure you turn off the water and press the lever on the spray nozzle to remove additional water. The hose should start to contract back to its normal size.

Important information:

Do not leave the water turned on and the hose under pressure when not in use for a prolonged amount of time.

Always drain the hose after use.

Do not cut or puncture the hose and keep away from sharp objects such as thorn bushes.

Do not run hot water through the hose.

Keep out of sunlight for prolonged amounts of time and store the hose in a cool dry place after use.

Water pressure should not exceed 12 bar, as the hose could burst. Home water connections never exceed 8.5 bar.

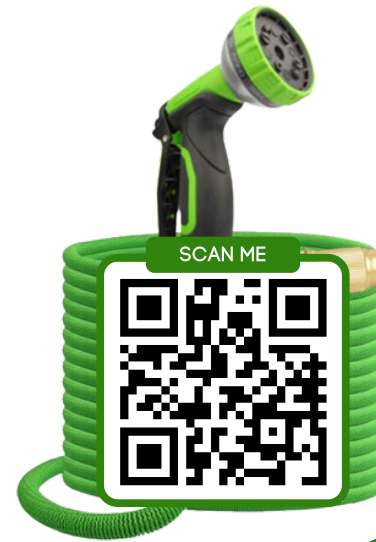

For water pumps, the water pressure can be adjusted up to a max of 12 bar of water pressure.
